

OPERATION INSTRUCTIONS

1. Make sure your receiver is unplugged from the power socket and attach your coaxial cables to the proper ports on the DSF120+.
2. Turn on your satellite receiver & the DSF120+ will automatically turn on.
3. Turn the knob on the side of the DSF120+ all the way up.
4. Start adjusting the azimuth, elevation, and polarization of your satellite dish & LNBF to the proper degrees. (Contact your satellite dealer for this information or visit www.wsidigital.com/azel_finder.htm)
5. Once you lock in the satellite signal, press "ATT-" button two or three times until the DSF120+ shows about half the signal.
6. Re-adjust your satellite dish again until you get the highest signal level possible.
7. Repeat steps 5 & 6 two to three times or until you get the highest possible signal level.
